

Risk Reference and Link to Strategic Priority	Risk Description				
SRR1 Strategic Priority 1, 2, 3 and 4	There is a risk that: We fail to deliver our role to influence a system shift to prevention, reduce health inequalities and address determinants of health. Caused by: 1. Poor alignment of PHW specialist resources, capabilities and programmes with our long-term strategy 2. Failure to generate the quality of evidence and supporting data to shape our influencing and delivery 3. Insufficient/Ineffective public health advice, evidence and action <i>within our remit</i> 4. Ineffective engagement, advocacy and communication with partners, the public and policymakers 5. Insufficient system leadership and co-ordination with stakeholders and partners 6. Programmes which do not support our population in achieving healthier lives Resulting in: We fail to have the impact required to reverse the worsening healthy life expectancy of the population of Wales. Wales fails to close widening gaps in health outcomes between our most and least deprived populations.

Trend	Current Position of Risk Including Risk Appetite and Risk Decision		Position Statement – Executive Director Update		
9 — 9 — 9 AprilMayJune	<table><tr><td>Open</td><td>PHW is open to consider all potential options, subject to continued application and/or establishment of controls recognising that there could be a high risk of exposure.</td></tr></table> Current Score = 9 Target Score = 6 Risk Appetite Level Applied = Open, therefore, within tolerance level.	Open	PHW is open to consider all potential options, subject to continued application and/or establishment of controls recognising that there could be a high risk of exposure.	July 2026 Update Summary Healthy life expectancy in Wales continues to worsen and PHW action alone will not reverse this without wider public health system change, including collaboration with and action by Health Boards, Local Authorities and the voluntary and community sector. PHW is therefore strengthening controls against SRR1 by: 1. Strengthening delivery and demonstrating impact through the revised IMTP response,	
Open	PHW is open to consider all potential options, subject to continued application and/or establishment of controls recognising that there could be a high risk of exposure.				

		with sharper priorities, clearer accountability and a stronger focus on measurable impact. 2. Building national prevention pathways to embed prevention across the system. Two examples are OPIP, which brings £8m to develop a bilingual digital obesity pathway for Wales and the hypertension pilot, with around 38,000 people identified with hypertension and treated to target. 3. Refocusing programmes and resources across the Health and Wellbeing Directorate so that tobacco, healthy weight, diabetes, physical activity, food systems, community approaches and wider determinants work are better aligned to improving healthy life expectancy and reducing inequalities. 4. Embedding prevention in the system through Community by Design by co-leading the prevention and population health management workstream, developing national prevention standards, shaping the national prevention architecture, influencing NHS workforce skills and development framework to embed prevention and creating a practical route for NHS Wales to act earlier and reduce avoidable deterioration. Embedding our Prevention Based Health and Care (PBHC) framework, within the Community by Design prevention work to embed prevention in the health and care system in Wales. Detail Healthy life expectancy in Wales continues to worsen. The latest ONS data shows that Wales had the largest fall in healthy life expectancy for both males
--	--	---

		and females between 2019–2021 and 2022–2024. This confirms that SRR1 remains live and that PHW must accelerate action on prevention, inequalities and the wider determinants of health. During June, PHW strengthened the controls against this risk. The revised IMTP response to Welsh Government revised delivery, with sharper priorities, stronger accountability and a more explicit focus on prevention, inequalities, access, system pressures and measurable impact. There is evidence of direct programme impact. The National Quality Improvement Programme for Hypertension has delivered early pilot outcomes, with around 38,000 people identified with hypertension and treated to target. This is a significant prevention gain: better detection and control of high blood pressure will reduce avoidable cardiovascular disease, stroke and premature mortality over time, and the pilot provides a scalable model for using population health management and primary care quality improvement to deliver measurable outcomes. The Healthy Weight Systems and Pathways Programme has secured £8 million through the UK-wide Obesity Pathway Innovation Programme. This will enable development of a bilingual, digitally enabled obesity pathway for Wales. OPIP moves the work from general prevention messaging into a structured pathway model, with potential to improve access, reduce variation, strengthen outcomes and build the evidence base for national delivery.
--	--	---

		Other major prevention programmes are also being sharpened. Tobacco, vaping and nicotine work is supporting health boards to prepare for implementation of the Tobacco and Vapes Act and has provided timely advice to Welsh Government on vaping among children and young people. The All Wales Diabetes Prevention Programme continues to move towards mainstreaming, supported by an updated protocol and work with health boards on sustainable delivery, although financial pressures remain a barrier to universal roll-out. Continued national leadership and coordination of Gwen am Byth, our national oral health improvement programme for older people in Wales has continued to expand its reach across Wales, with strong engagement from care homes and wider health and social care partners. Activity focused on supporting participating homes, delivering staff training, carrying out quality assurance visits, and strengthening partnership working across local health boards. 85% of eligible care homes engaged in the programme (497 homes) training 3,792 care home staff, 866 domiciliary care staff and 1,107 healthcare professionals with links to care homes trained across Wales in 2025/26. The Health and Wellbeing Directorate is continuing to review and refocus programmes to improve reach, access, impact and outcomes. Healthy Working Wales and Tobacco Control have already been
--	--	---

		reviewed and refocused. Further work is bringing together healthy weight, diabetes, physical activity, food systems, community approaches and wider determinants into a more coherent prevention ecosystem, reducing duplication and focusing effort where it can make the greatest contribution to healthy life expectancy and inequalities. Because PHW action alone will not change this, Community by Design is now a key additional control for SRR1. PHW is co-leading the prevention and population health management workstream to make prevention a practical operating model for NHS Wales. During May and June, PHW helped establish programme governance, drafted the initial National Model for Prevention and National Standards for Prevention, defined the first prevention architecture, and convened a number of multi-agency Task and Finish Groups with Welsh Government, NHS Executive, HEIW, DHCW and health boards. This gives NHS Wales a practical route to act earlier, identify risk sooner, target support more effectively and reduce avoidable deterioration. It also creates a mechanism for systematically embedding prevention across primary, community and secondary care, with clearer expectations on workforce, data, delivery and accountability. PHW is continuing to develop and strengthen our partnership agreement with the Wales Council for Voluntary Action (WCVA). Being 'partners in prevention' is a key element of this. (see detail below)
--	--	--

		In addition, PHW's refreshed Young People's Engagement Programme was launched this month, employing 12 young people from across Wales to work alongside us. For more detail on both the PHW-WCVA Partnership Agreement and the Young People's Engagement Programme please progress update on actions below. Overall, the July position demonstrates strengthened controls against SRR1. PHW is aligning resources to priorities, using Community by Design to embed prevention in the health and care system, generating stronger evidence and data, providing timely advice to Welsh Government and NHS Wales, and refocusing programmes towards measurable population impact. PHW action alone will not reverse the decline in healthy life expectancy or close inequalities without wider system change. However, the current position shows that PHW is moving from advocacy and frameworks into standards, delivery architecture, national pathways, programme review and measurable prevention outcomes. April/May 2026 Update Latest published data shows that for both males and females, in 2022 to 2024, healthy life expectancy decreased compared with 2019 to 2021, with the largest decreases observed in Wales.- <u>Healthy life expectancy, UK - Office for National Statistics</u>. This reinforces the importance and urgency of PHW's work on prevention and health equity.
--	--	---

		PHW has completed the first phase of its advocacy work and promoted prevention-focused policy messages (e.g., via the Future Generations Commissioner's Report). Significant progress includes: • Launching the first prevention-based framework for health and care • Seconding expertise into Welsh Government to review prevention architecture • Supporting a system-wide assessment of preventive spend • Establishing a Prevention Advisory Group chaired by the CMO The next phase will focus on developing an internal tactical plan that brings together PHW's role in leading and influencing the system-wide shift to prevention, tackling health inequalities, and addressing wider determinants of health. To mitigate the risk, PHW is committed to: • Aligning strategic priorities and specialist capabilities to embed prevention and equity • Generating and mobilising high-quality evidence and data to drive policy and delivery • Providing timely, trusted and impactful public health advice • Strengthening engagement and communication with partners, policymakers, the third sector, and the public • Exercising strong system leadership through coordination and collaboration • Designing and delivering inclusive, evidence-based programmes that address the needs of disadvantaged groups
--	--	--

		It is recognised that influencing a system shift toward prevention alone may not be sufficient to reverse current trends in healthy life expectancy or close the widening health inequalities without wider system change. Health and Wellbeing Directorate continues with reviewing and refreshing programmes of work to ensure we focus on actions which will address healthy life expectancy. A number of programmes including Healthy Working Wales, Mental and Social Wellbeing and Tobacco Control programmes have been reviewed and refocused. The National Quality Improvement Programme for Hypertension has in its first quarter ensured 38,000 people have been identified with hypertension and treated to target.
