HEP C
U Later

Get tested. Get treated. Get cured.

Did you know?

Hepatitis C is spread by blood-to-blood contact with someone who has the virus.

You can have hepatitis C without symptoms.

Hepatitis C can be cured with a simple course of tablets.

You could be at risk of hepatitis C if you have ever:

Had unprotected sex with someone who may have had hepatitis C, especially if there were opportunities for blood to blood contact.

Had beauty treatments using needles which may not have been sterilised, including semi-permanent make up.

Had a piercing, tattoo, cut-throat shave or acupuncture using equipment which may not have been sterilised.

Received a blood transfusion before 1996.

Had dental or medical treatment abroad in unsterile conditions.

Sharing drug injecting equipment or other drug using equipment (including syringes, needles, spoons, water or filters for drawing up, crack pipes, or snorting straws/notes).

Get tested today.

- Testing is free.
- It is a simple finger prick blood test.

But remember...

- There is no immunity. If you have completed treatment, you can still be re-infected.
- Remember to get tested regularly.
- There is no vaccine to prevent hepatitis C.

If you need treatment:

- Treatment is just one dose of tablets a day.
- No injections.
- Treatment has very few side effects and a very high success rate.
- Treatment needs to be taken for 8-12 weeks in most cases.
