# Annual COVER report

2025-26

Public Health Wales

Vaccine Preventable Disease Programme

# Vaccine Uptake in Children in Wales

## COVER Annual Report 2026

Data for the year ending 31<sup>st</sup> March 2026

### Headline summary

From April 2025 to March 2026, there have been small decreases in most routine immunisations for children up to five years of age. However, uptake of routine vaccinations in adolescents remained stable, or increased in some cases. Significant inequalities remain in completion of the routine schedule by four years of age, with the inequality gap slightly reducing over the past year (reflecting a small decrease in vaccination uptake by four years in the least deprived areas of Wales).

### Key points

- In 2025/26 uptake of the '6 in 1' (DTaP/IPV/Hib/HepB) and pneumococcal conjugate vaccinations in one year old children in Wales was 93.1% and 94.6% respectively.
- MenB vaccine uptake was 93.0% for two doses, and uptake of two doses of rotavirus vaccine was 90.9% at one year.
- From 1st January 2026, varicella vaccination was introduced into the routine childhood immunisation schedule and is now delivered as part of the combined MMRV vaccine. MMRV is the only MMR-containing vaccine being offered from 1st January 2026 to children born from 1st January 2020 [1]. Throughout this report, references to MMR1 and MMR2 also include a small number of children who would have attended their appointment late and received MMRV.
- MMR uptake was 92.5% for the first dose at two years.
- MenB uptake was 92.2% for the complete course at two years.
- By their fourth birthday, 84.6% of children were up to date with recommended immunisations. The difference in uptake between those resident in the least and most deprived areas of Wales was 9.3 percentage points.
- MMR dose two uptake in children at five years of age was 89.3%, and uptake of the pre-school '4 in 1' (DTaP/IPV) booster in this age-group was 89.2%.
- School-based vaccination sessions for teenagers are continuing for the 2025/26 academic year. Human Papillomavirus (HPV) vaccine uptake in children turning 14 years of age during the 2025/26 school year (School Year 9) was 72.4%. Uptake in children turning 15 years of age (School Year 10) was 76.2%.
- MMR uptake, for a full two dose course, was 93.3% and 93.5% for teenagers turning 15 and 16 years of age respectively during the 2025/26 school year.
- MenACWY vaccine uptake in teenagers turning 15 and 16 years of age during the 2025/26 school year was 74.5% and 76.4%.

### Background

Surveillance of uptake and equality of routine childhood vaccinations in Wales is carried out by Public Health Wales Vaccine Preventable Disease Programme through the national COVER scheme in Wales (Coverage of Vaccination Evaluation Rapidly). The annual COVER report summarises this surveillance from April 2025 to March 2026.

These annual results for 2025/26 are for one-year cohorts of children living in Wales as of 31<sup>st</sup> March 2026. Uptake is reported on those reaching their first, second, fourth and fifth birthdays between 1<sup>st</sup> April 2025 and 31<sup>st</sup> March 2026. Uptake of vaccinations in those reaching 14, 15 and 16 years of age are presented by school year.

Data for this report was provided by NHS Wales Informatics Service from Children and Young Persons Integrated System (CYPrIS). The data was sourced from Community Child Health databases maintained by local Child Health Office staff in Trusts throughout Wales based on regular returns from doctors and nurses who immunise or advise on immunisation. Uptake data presented throughout are for LHB resident population, not for LHB GP practice populations.

Inequalities in uptake of routine vaccinations at four years of age are also presented. National quintiles of deprivation were calculated according to the Lower Super Output Area (LSOA) rankings contained in the Welsh Index of Multiple Deprivation (WIMD 2025). Deprivation rankings contained in the WIMD are relative, not absolute values, and they refer to an overall composite measure of factors related to deprivation for all residents in the LSOA as a whole, not the circumstances of individual residents within the LSOA.

# Childhood Vaccinations in Wales Annual Report 2026

## 1 year

## 2 years

Figures presented are for 3 doses of 6in1; 2 doses of MenB; 2 doses of Rotavirus; 1 dose of PCV at one year of age. For two year olds, it is 1 dose of MMR, 2nd dose of PCV and the HibMenC booster.

## Up to date with vaccinations at:

Children who are up to date with their Hib/MenC booster, '4 in 1' DTaP/IPV pre-school booster, and MMR vaccines.

## HPV Vaccine Uptake

From September 2023 the HPV vaccination programme changed from a two dose to a one-dose-only schedule. From 2018/19 to 2020/21, a complete one-dose course in girls is presented. From 2021/22, a complete one-dose course in girls and boys is presented. Uptake data are as at end of March for each academic year presented, final uptake figures are likely to be higher for each cohort as vaccination offers continue throughout the academic year.

## 16 years

## Findings

1. '6 in 1' DTaP/IPV/Hib/HepB<sup>1</sup> vaccine uptake (all three doses) in children reaching their first birthday decreased to 93.1%, compared to 94.1% in the previous year. Uptake ranged by health board (HB) from 91.8% (Cardiff and Vale) to 95.4% (Cwm Taf Morgannwg) and by local authority (LA) from 89.3% (Torfaen) to 96.2% (Swansea). Four of the 22 LAs achieved the 95% target (Figures 1, 2, 5, 7 and Tables 2, 3).
2. Uptake of pneumococcal conjugate vaccination (PCV) in children reaching their first birthday was 94.6%, ranging by HB from 93.3% (Cardiff and Vale) to 96.7% (Cwm Taf Morgannwg) and by LA from 92.3% (Newport) to 97.2% (Swansea) (Figures 1, 2 and Tables 2, 3).
3. Rotavirus vaccine uptake of two doses in children reaching their first birthday decreased to 90.9%, compared to 92.0% in the previous year. Uptake ranged by HB from 89.1% (Aneurin Bevan) to 94.0% (Cwm Taf Morgannwg) and by LA from 86.5% (Torfaen) to 94.8% (Anglesey) (Figures 1, 2 and Tables 2, 3).
4. Meningococcal serotype B vaccination (MenB) uptake of two doses in children at one year of age was 93.0%, ranging by HB from 90.4% (Cardiff and Vale) to 95.9% (Cwm Taf Morgannwg) and by LA from 89.8% (Cardiff) to 96.4% (Rhondda Cynon Taf) (Table 3).
5. MMR<sup>2</sup> uptake of one dose by two years of age decreased to 92.5%, compared to 93.0% in the previous year. Uptake ranged by HB from 90.6% (Cardiff and Vale) to 94.7% (Cwm Taf Morgannwg) and by LA from 90.0% (Cardiff) to 95.3% (Anglesey). Zero HBs achieved the target uptake of 95%, and 2 out of 22 LAs exceeded the 95% target (Figures 1, 5, 8 and Tables 2, 4).
6. Pneumococcal Conjugate Vaccine (PCVf) uptake of the final dose by two years of age was 92.4%. Uptake by HB ranged from 89.9% (Cardiff and Vale) to 94.6% (Cwm Taf Morgannwg) and by LA from 89.2% (Cardiff) to 95.1% (Anglesey) (Figure 2 and Tables 2, 4).
7. Hib/MenC booster uptake by two years of age was 91.7%, ranging by HB from 89.0% (Cardiff and Vale) to 94.3% (Cwm Taf Morgannwg) and by LA from 88.1% (Cardiff) to 94.9% (Anglesey) (Figures 1, 2 and Tables 2, 4). From 1<sup>st</sup> July 2025, the offer of Hib/MenC booster was removed from the routine childhood immunisation schedule [2]. Children who turn one year of age on or before 30<sup>th</sup> June 2025, and present late to the one-year vaccination appointment after 1<sup>st</sup> July 2025, will instead be offered an additional fourth dose of the DTaP/IPV/Hib/HepB (hexavalent) vaccine [1,2].
8. MenB vaccine uptake of a complete course in children at two years of age was 92.2%, ranging by HB from 89.5% (Cardiff and Vale) to 94.5% (Cwm Taf Morgannwg), and by LA from 88.7% (Cardiff) to 95.3% (Anglesey).
9. Hib/MenC booster coverage in children by their fourth birthday was 93.4% and ranged by HB from 91.8% (Aneurin Bevan) to 96.0% (Cwm Taf Morgannwg) (Table 5).
10. '4 in 1' DTaP/IPV 'pre-school booster' uptake in children by four years of age was 86.0%, this ranged by HB from 82.2% (Cardiff and Vale) to 89.8% (Powys Teaching) (Table 5).
11. MMR<sup>2</sup> vaccine uptake of a complete two dose course in children by four years of age was 86.2%, this ranged by HB from 83.0% (Cardiff and Vale) to 89.1% (Cwm Taf Morgannwg) (Table 5).

<sup>1</sup> DTaP/IPV/Hib/HepB vaccine protects against diphtheria, tetanus, pertussis (Whooping Cough), polio, Hib and Hepatitis B infection.

<sup>2</sup> MMR protects against measles, mumps and rubella infections. From 1<sup>st</sup> January 2026, MMRV is the only MMR-containing vaccine being offered to children born from 1<sup>st</sup> January 2020.

12. The percentage of children who were up to date with their Hib/MenC booster, '4 in 1' DTaP/IPV pre-school booster and MMR vaccines by four years of age was 84.6%. This ranged by HB from 80.7% (Cardiff and Vale) to 87.9% (Cwm Taf Morgannwg and Powys) and by LA from 76.7% (Newport) to 91.4% (Anglesey) (Figure 4 and Tables 1, 2, 5).
13. The percentage of children who were up to date with their routine vaccinations by four years of age varied according to the national quintile of deprivation of the LSOA in which they resided. Nationally, the percentage of children up to date with their routine immunisations by four years of age ranged from 79.7% in the most deprived quintile of LSOAs to 89.0% in the least deprived quintile of LSOAs. The difference in uptake between the least deprived quintile and the most deprived quintile was 9.3 percentage points; this is a narrowing of the inequality gap compared to 2024/25 (11.0 percentage points) (Figures 11, 12 and Table 6).
14. MMR<sup>2</sup> uptake of two doses in children at five years of age was 89.3%, ranging by HB from 86.8% (Cardiff and Vale) to 91.6% (Cwm Taf Morgannwg). Coverage of one dose of MMR in children at five years of age was 94.9% and ranged by HB from 92.9% (Cardiff & Vale) to 96.5% (Cwm Taf Morgannwg) (Figures 1, 2, 6, 9 and Tables 2, 7).
15. '4 in 1' DTaP/IPV 'pre-school booster' uptake in children reaching their fifth birthday this year was 89.2% (Figures 2, 6, 10 and Tables 2, 7).
16. HPV vaccine uptake in the 2025/26 School Year 9 group (reaching their 14<sup>th</sup> birthday between 01/09/25 and 31/08/26) was 72.4%. For girls only, uptake was 75.3%. Uptake ranged by HB from 64.5% (Betsi Cadwaladr) to 80.6% (Swansea Bay) and by LA from 54.9% (Denbighshire) to 82.2% (Ceredigion) (Table 8).
17. HPV vaccine uptake in the 2025/26 School Year 10 group (reaching their 15<sup>th</sup> birthday between 01/09/25 and 31/08/26) was 76.2%. For girls only, uptake was 78.6%. Uptake ranged by HB from 70.7% (Aneurin Bevan) to 86.5% (Swansea Bay) and by LA from 57.1% (Denbighshire) to 86.8% (Swansea) (Table 8).
18. MMR coverage of two doses in teenagers turning 15 years of age between 01/09/25 and 31/08/26 was 93.3%, ranging by HB from 90.7% (Cardiff and Vale) to 95.2% (Swansea Bay) and by LA from 87.3% (Newport) to 97.1% (Anglesey). Coverage of one dose of MMR in 15 year olds was 96.0%, ranging by HB from 94.5% (Aneurin Bevan) to 97.5% (Cwm Taf Morgannwg). A breakdown by sex indicates that 93.5% of girls had received a full (two MMR doses) course of immunisation against rubella and coverage of one dose was 96.0% (Figure 13 and Table 9).
19. Td/IPV 'teenage booster' uptake in teenagers reaching 15 years of age between 01/09/25 and 31/08/26 was 74.7%. Uptake ranged by HB from 69.4% (Cardiff and Vale) to 82.1% (Powys) and by LA from 60.0% (Denbighshire) to 83.2% (Bridgend) (Figure 13 and Table 9).
20. Coverage of MenACWY vaccine in the 2025/26 School Year 10 group is currently 74.5%. Coverage in the 2025/26 School Year 11 group is currently 76.4% (Figure 13, Table 9 and 10).
21. MMR coverage of two doses in teenagers turning 16 years of age during the 2025/26 school year was 93.5%, ranging by HB from 90.9% (Cardiff and Vale) to 95.3% (Swansea Bay) and by LA from 88.5% (Monmouthshire) to 97.0% (Neath Port Talbot). Coverage of one dose of MMR in 16 year olds was 95.9%, ranging by HB from 94.3% (Aneurin Bevan) to 97.4% (Cwm Taf Morgannwg). A breakdown by sex indicates that 93.4% of girls had received a full (two MMR doses) course of immunisation against rubella and coverage of one dose was 95.8% (Table 10).

<sup>2</sup> MMR protects against measles, mumps and rubella infections. From 1<sup>st</sup> January 2026, MMRV is the only MMR-containing vaccine being offered to children born from 1<sup>st</sup> January 2020.

22. Td/IPV 'teenage booster' uptake in teenagers reaching 16 years during the 2025/26 school year was 76.5%. Uptake ranged by HB from 70.8% (Aneurin Bevan) to 84.3% (Swansea Bay) and by LA from 67.0% (Newport) to 85.8% (Ceredigion) (Table 10).
23. Uptake of hepatitis B immunisation in babies at risk of perinatal infection, extracted from the Public Health Wales Tarian Database, is presented in Table 11. Uptake of dose 3 in children who were at risk of perinatal infection and reached their first birthday in the year ending 31<sup>st</sup> March 2026 was 94.4%. Uptake of dose four in children who were at risk of perinatal infection and reached their second birthday in the year ending 31<sup>st</sup> March 2026 was 78.6%. Uptake of dose four in children who were at risk of perinatal infection and reached their fifth birthday in the year ending 31<sup>st</sup> March 2026 was 100%.

---

<sup>1</sup> Completed "4 in 1" preschool booster, the Hib/MenC booster and second MMR dose (or MMRV if given after 1<sup>st</sup> January 2026) by four years of age.

## Comment

Uptake in younger children has decreased this year in comparison to last year, continuing a declining trend [3]. For the annual cohort of one-year-olds, uptake of the '6 in 1' vaccine remained below 95% at 93.1%, and uptake of the pneumococcal conjugate vaccine fell below 95% at 94.6%. Uptake continues to vary between health board areas.

Uptake of two doses of Men B vaccine at one year of age was below 95% at 93.0%; with uptake of a complete three-dose course in two-year-olds slightly lower (92.2%). Uptake of MMR1 at two years of age remains below 95% for the full year cohort with uptake at 92.3%.

The proportion of children who were up to date with their routine immunisations by four years of age decreased this year to 84.6%, from 85.3%. Of all the immunisations that are included in this composite measure, uptake of the '4 in 1' preschool booster is the lowest at 86.0%, slightly lower than the second dose of MMR (86.2%), with Hib/MenC booster uptake the highest (93.4%). Children attending late for their appointment may have received a fourth dose of "6 in 1" instead of Hib/MenC to protect them against Hib, following the initial changes to the childhood vaccination schedule in July 2025 [2].

The reported inequality gap in immunisation coverage between four-year-olds residing in the most and least deprived areas decreased compared to 2024/25, to 9.3 percentage points from 11.0. The percentage of children up to date with their routine immunisations decreased slightly across most quintiles since 2024/25, apart from the most deprived quintile where it remained stable. Further work is recommended to explore the root cause of these inequalities and identify interventions to reduce the gap.

Since 2021, there has been a declining trend in coverage of teenage immunisations [3]. Uptake of the Td/IPV vaccine was 74.7% among the 2025/26 School Year 10 cohort and 76.5% among year 11. This represents an increase compared to the 2024/25 year 10 and year 11 cohort reported on last year, when uptake was 73.5% and 72.2%, respectively [3]. A similar trend can be seen in coverage of MenACWY.

Uptake of one dose of HPV in the 2025/26 School Year 9 cohort is currently 72.4% (75.3% for girls and 69.6% for boys). This is a slight increase compared to the 2024/25 cohort at 72.0%. Uptake data are as at end of March for each academic year presented, final uptake figures are likely to be higher for each cohort as vaccination catch-up offers continue throughout the academic year.

Although uptake in adolescent immunisations has increased over the past two years, uptake remains lower than pre-2020 levels, and there continues to be a need for catch-up in this age group to improve coverage in order to provide protection against severe invasive meningococcal disease during the age of higher risk, protection from HPV-related cancers in adulthood and reinforced protection against diphtheria, tetanus and polio.

In 2024 there was a resurgence of measles across the UK, with 2,911 laboratory confirmed cases reported by the UKHSA, the highest recorded since 2012 [4]. This led to the WHO announcing that there was re-established transmission in the UK following three years of measles being eliminated [5]. During the second half of 2025 case numbers in England stabilised. However, since January 2026 there has been an increase in confirmed cases, mainly around London and the West Midlands [4]. In 2025, there were two laboratory confirmed cases of measles, and one clinically compatible, untested case in Wales [6]. Importation of measles cases, following travel to measles-affected areas, and subsequent spread in the community remains a risk in Wales. This continues to highlight the importance of checking vaccination status and facilitating catch-up at every opportunity, especially around school entry and alongside school vaccination sessions.

<sup>1</sup> Uptake of acellular pertussis used as proxy.

<sup>2</sup> Uptake of Hib/MenC booster will also include those with no recorded Hib/MenC booster but received the additional hexavalent vaccine from 1st July 2025.

<sup>3</sup> From 1st January 2026, MMRV is the only MMR-containing vaccine being offered to children born from 1st January 2020.

<sup>4</sup> Completed "4 in 1" preschool booster, the Hib/MenC booster and second MMR dose (or MMRV if given after 1st January 2026) by four years of age.

**Table 6.** Percentages of children who are up to date with routine immunisations<sup>1</sup> by four years of age, by quintile of deprivation of the Lower Super Output Area in which they reside. Vaccine uptake is presented for children reaching their 4th birthday between 01/04/2025 and 31/03/2026 and resident on 31/03/2026.

<sup>1</sup> Final (booster) dose of pneumococcal conjugate vaccine

<sup>2</sup> Uptake of Hib/MenC booster will also include those with no recorded Hib/MenC booster but received the additional hexavalent vaccine from 1st July 2025.

<sup>3</sup> From 1<sup>st</sup> January 2026, MMRV is the only MMR-containing vaccine being offered to children born from 1<sup>st</sup> January 2020.

**Table 8.** HPV Vaccine uptake in children reaching their 14<sup>th</sup>, 15<sup>th</sup> and 16<sup>th</sup> birthdays between 01/09/2025 and 31/08/2026 and resident on 31/03/2026 (School Year 9, 10 and 11 during 2025/26).

<sup>1</sup>Data reflects immunisations given and recorded on the Public Health Wales case and incident management system (Tarian) of babies born to hepatitis B positive mothers. The first dose refers to the monovalent dose given at birth, with doses 2, 3 and 4 reflecting any Hep-B containing vaccine, given either as part of the selective hepatitis b vaccination programme or routine immunisation schedule.
