INTRODUCTION

The Appendix is supplementary to the Quality Measures (QM) report on the 2013 to 2018 all-Wales Point Prevalence Survey (PPS) of antimicrobial usage in secondary care in Wales. The Appendix reports on the following Quality Measures:

- Systemic antibacterial prescribing rate
- Reason for treatment documented
- Stop/review date documented

The Appendix includes data for all hospitals (acute, non-acute and community) and all wards including psychiatric wards that participated in the survey in 2018.

Note: For the acute hospitals, hospital-level data may differ to those published in the main QM report due to the inclusion of data for psychiatric wards in the Appendix. Data for psychiatric wards has been inconsistently collected in previous surveys, and are removed from the main QM report analysis in an attempt to standardise the data, which reports on trends over time.

QUALITY MEASURES

Antibacterial prescribing rates

Figure 1: Antibacterial prescribing rates by hospital

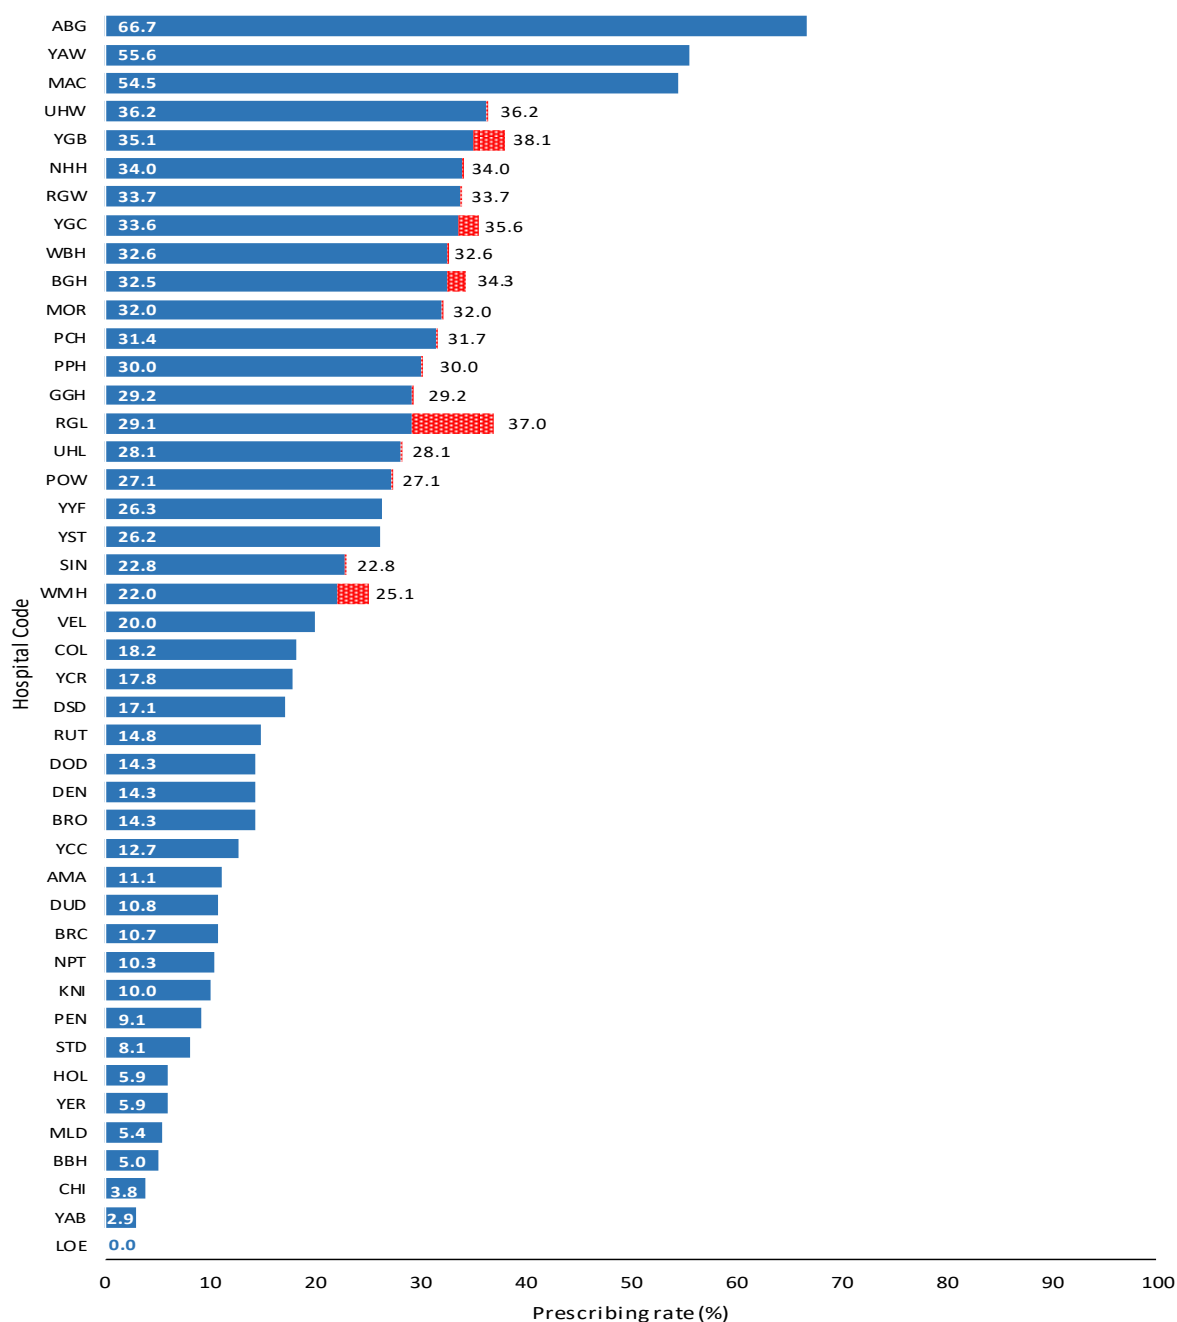

Figure 1 shows systemic antibacterial prescribing rates by hospital: The **blue bars** show the rate for the hospitals (acute, non-acute, and community) with all wards included in the data set. The **hashed red bars** show differences in the rate for the acute hospitals with the exclusion of psychiatric wards - as reported in the QM report.

The 2018 prescribing rate ranged from **66.7%** in Abergele (ABG) to **0.0%** in Llanidloes (LOE). The ward-level antibacterial prescribing for hospitals that participated in the survey in 2018 are shown in **Table 1**.

Table 1: Antibacterial and antimicrobial prescribing by ward/hospital

Hospital	Ward	No. Patients	No. on Antimicrobials	No. on Antibacterials	Antimicrobial rate (%)	Antibacterial rate (%)

Reason for treatment documented (notes/chart)

Figure 2: Reason for treatment documented (notes/chart) by hospital

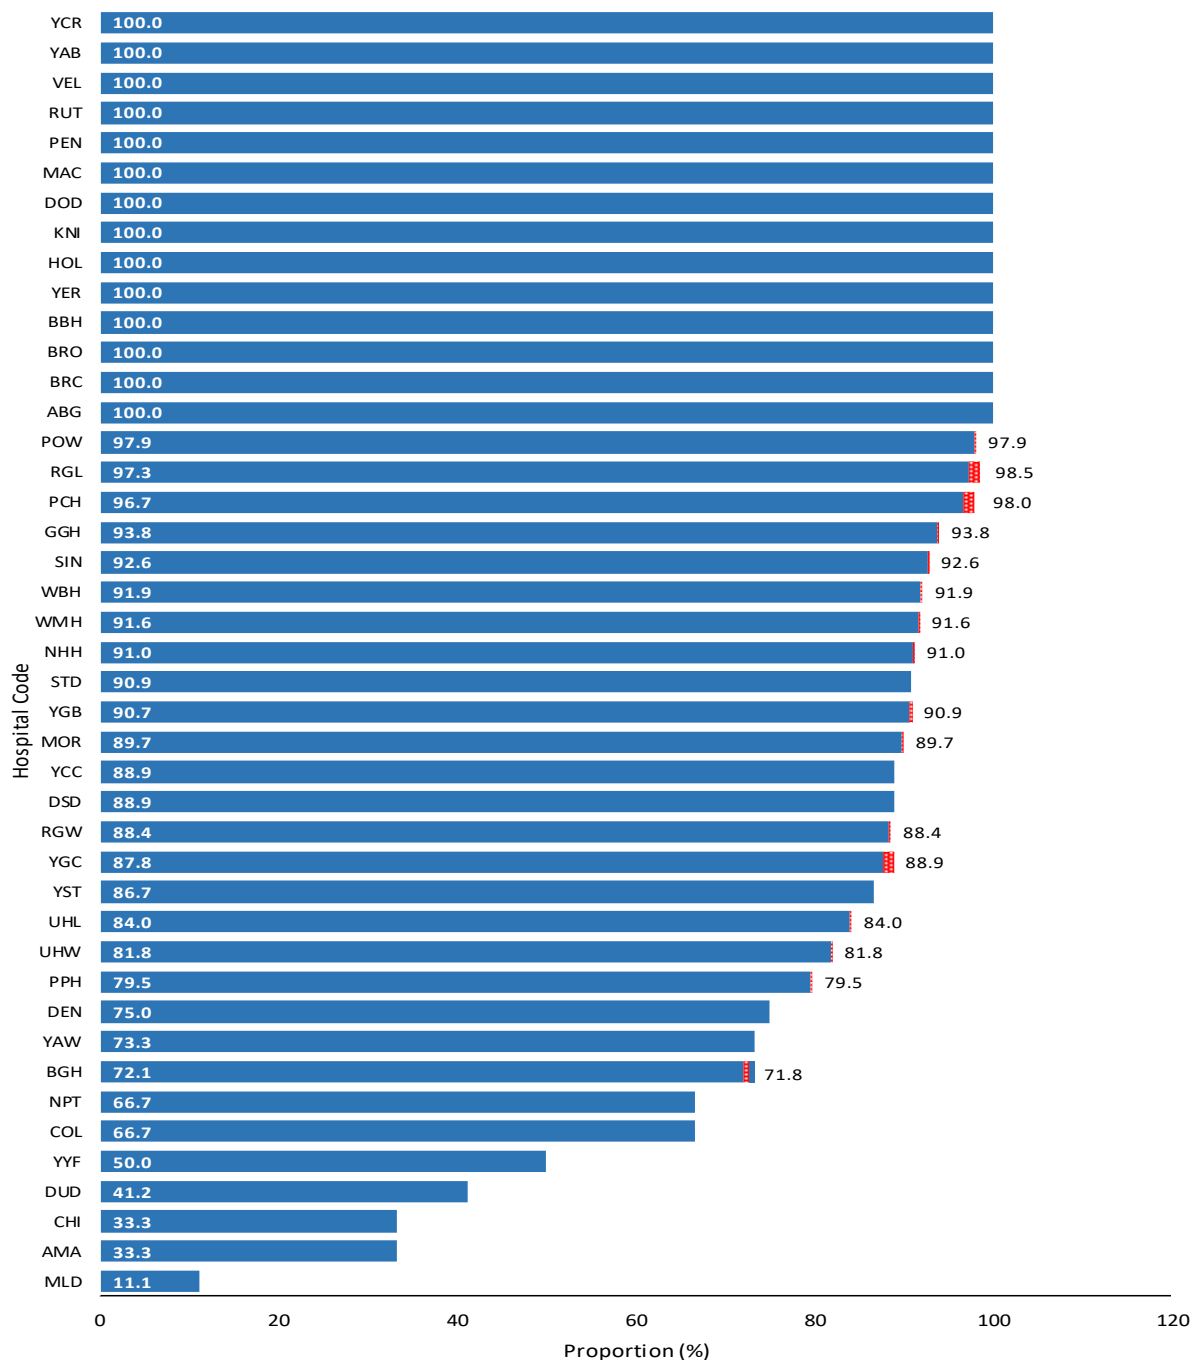

Figure 2 shows proportion of antimicrobials with reason for treatment documented: The **blue bars** show the rate for the hospitals (acute, non-acute, and community) with all wards included in the data set. The **hashed red bars** show differences in the rate for the acute hospitals with the exclusion of psychiatric wards.

In 2018, the documentation rate ranged from **100.0%** in hospitals including Abergele (ABG) and Brecon (BRC) to **11.1%** in Mold (MLD). The ward-level documentation rates for hospitals that participated in the survey in 2018 are shown in **Table 2**.

Table 2: Reason for treatment documented (notes/chart) by ward/hospital

Hospital	Ward	No. antimicrobials with reason documented	Total antimicrobials prescribed	Reason documented (%)

Stop/review date for treatment documented (notes/chart)

Figure 3: Stop/review date documented by hospital

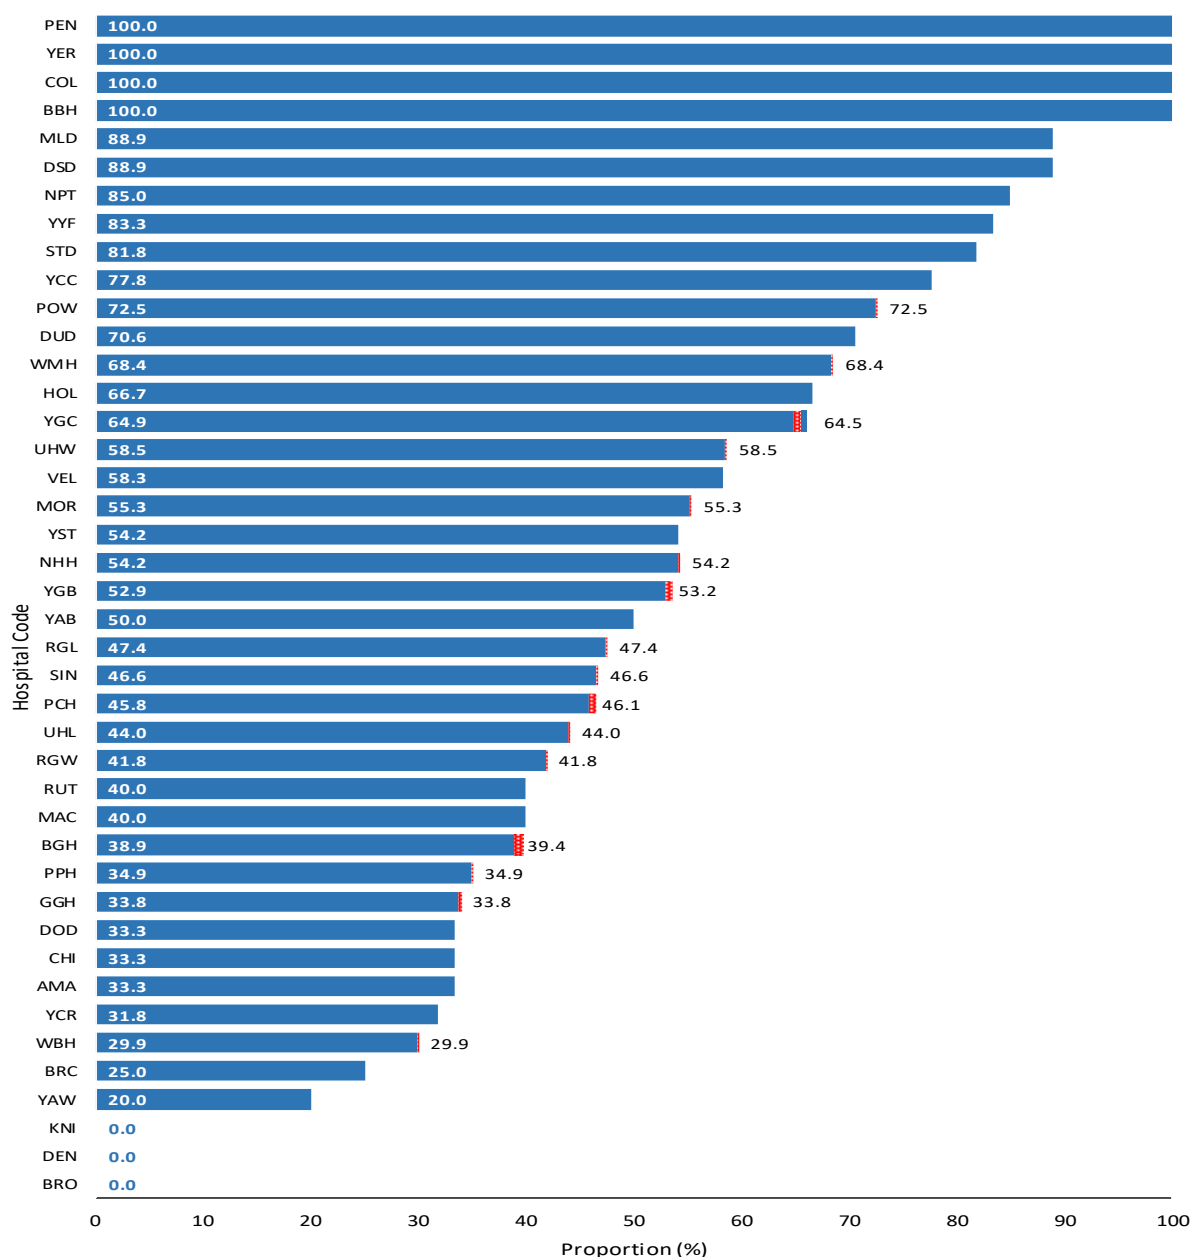

Figure 3 shows proportion of antimicrobials with stop/review date documented: The **blue bars** show the rate for the hospitals (acute, non-acute, and community) with all wards included in the data set. The **hashed red bars** show differences in the rate for the acute hospitals with the exclusion of psychiatric wards.

The stop/review rate ranged from **100.0%** in hospitals including Bryn Beryl (BBH) and Colwyn Bay (COL) to **0.0%** in Bronllys (BRO), Denbigh Infirmary (DEN) and Knighton (KNI). The ward-level documentation rates for hospitals that participated in the survey in 2018 are shown in **Table 3**.
