INTRODUCTION

Surgical site infections (SSI) are a substantial cause of mortality and morbidity among hospitalised patients. Studies on orthopaedic surgical site infections have shown them to result in considerable increases in lengths of stay, high rehospitalisation rates, and significant reductions in health-related quality of life^{1,2}. SSI is the second most common infection following a Caesarean section within a group of patients who are generally considered to be young, fit and well females³. Complications of both surgery have high human and financial costs^{1,2,4}.

The following annual rate report is a summary of information provided by the six Health Boards in Wales performing orthopaedic surgery and / or caesarean section procedures. The report includes data captured both during the hospital stay and post-discharge. The surveillance incorporates data collected by clinical teams (and midwives for c section surveillance) and uses internationally agreed definitions⁴, allowing Welsh data to be compared with and be incorporated into other international databases, such as the ECDC SSI database⁵.

The purpose of this report is to provide an all Wales trend rate report of infections over time and for individual Health Boards to have the opportunity to monitor their own trends over time.

1. ORTHOPAEDIC SSI SURVEILLANCE

ALL WALES SUMMARY

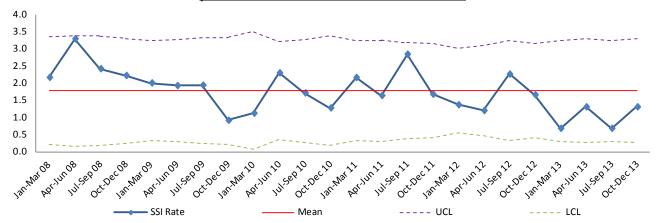

- This annual report covers SSI associated with elective primary hip arthroplasty and elective primary knee arthroplasty.
- A total of 2688 questionnaires were received for hip arthroplasties in 2013.
 2675 (99%) of forms could be further analysed for determining the overall SSI rate for 2013.
- 3 inpatient infections and 28 post-discharge infections were detected following hip arthroplasties in 2013, giving a crude overall SSI rate of 1.2%. This rate has decreased since 2012 (1.6%).
- A total of 2973 questionnaires were received for knee arthroplasties in 2013.
 2962 (99%) of forms could be further analysed for determining the overall SSI rate for 2013.
- 13 inpatient infections and 28 post-discharge infections were detected following knee arthroplasties in 2013, giving a crude overall SSI rate of 1.4%. This rate is similar to 2012 (1.9%).
- Annual / quarterly trend rates (2008 2013) have shown elective primary hip arthroplasty rates to decrease between 2008 and 2010, increase slightly in 2011, but continue to decrease again after this time.
- Annual / quarterly trend rates (2008 2013) have shown elective primary knee arthroplasty rates have decreased since 2008 with approximately a 57% reduction in the rate.

ALL WALES RESULTS

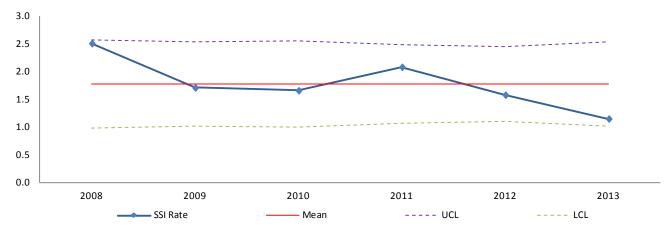

All Wales orthopaedic SSI rates for the period 01/01/2013 - 31/12/2013

| Mandatory procedure | Number of forms received | Number of valid forms received | Number of inpatient SSI | Number of post- discharge SSI | Overall SSI Rate |
|------------------------------------|--------------------------------|---|----------------------------------|--|---------------------|
| Elective primary hip arthroplasty | 2688 | 2675 | 3 | 28 | 1.2% |
| Elective primary knee arthroplasty | 2973 | 2962 | 13 | 28 | 1.4% |
| Total | 5661 | 5637 | 16 | 56 | 1.3% |

<u>All Wales elective primary hip arthroplasty overall quarterly SSI rates for the</u> period 01/01/2008 - 31/12/2013

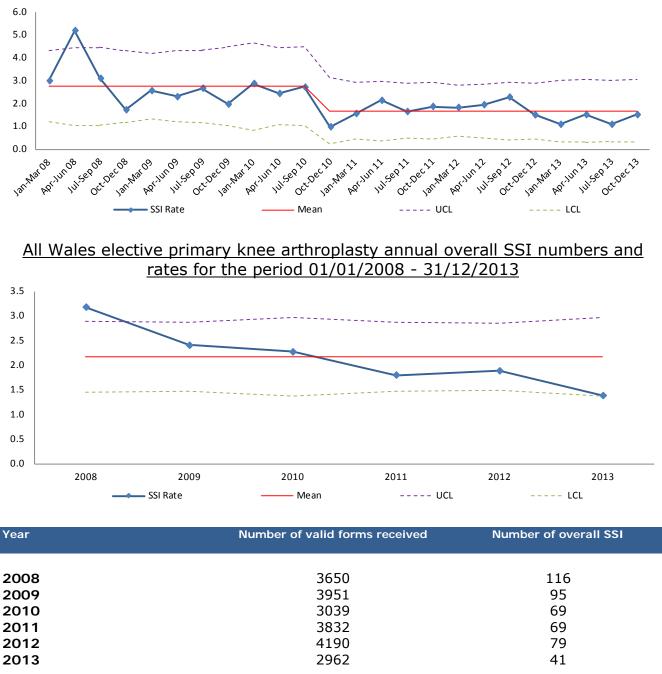

| Year | Number of valid forms received | Number of overall SSI |
|------|--------------------------------|-----------------------|
| 2008 | 2545 | 64 |
| 2009 | 2794 | 48 |
| 2010 | 2639 | 44 |
| 2011 | 3110 | 65 |
| 2012 | 3526 | 56 |
| 2013 | 2675 | 31 |

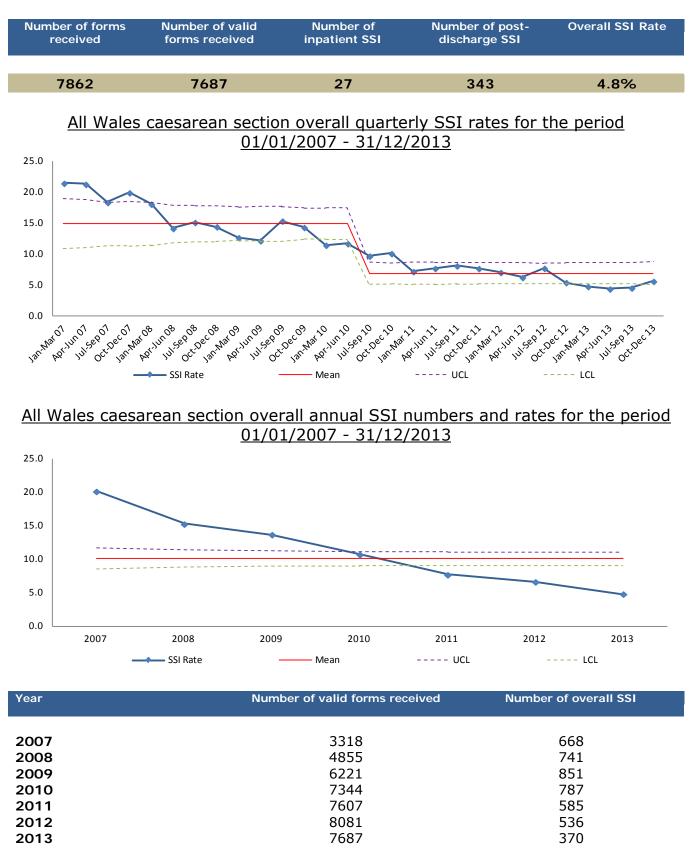

2. CAESAREAN SECTION SSI SURVEILLANCE

ALL WALES SUMMARY

- This annual reports covers SSI associated with lower and upper uterine segment c section procedures and excludes c section hysterectomy.
- A total of 7862 questionnaires were received for 2013. 7687 (98%) of forms could be further analysed for determining the overall SSI rate for 2013.
- 27 inpatient SSI and 343 post discharge SSI were detected for 2013, giving a crude overall SSI rate of 4.8%. This is approximately a 38% decrease in the rate when compared to 2013 (6.6%).
- Annual / quarterly trend data over time has shown the SSI rate to decrease since 2007. Furthermore the overall SSI rate has decreased by 76% when comparing data for 2013 with 2007.

ALL WALES RESULTS

All Wales caesarean section SSI rate for the period 01/01/2013 - 31/12/2013
