

## Appendix

### Areas included in analysis of AWISS data

Figure 5.6.4 shows accident & emergency (A&E) attendances for fractures between January 1999 and June 2001. The source of the data is the All Wales Injuries Surveillance System (AWISS). Not all A&E units in Wales participate in AWISS. Therefore the analysis has been restricted to those areas that are served exclusively by A&E units that have joined the system. The map below shows the location of Welsh A&E units and indicates whether or not they participate in AWISS. The map also shows the areas, served exclusively by a participating A&E unit, which have been included in the analysis.
