How are we doing in Wales?

Public Engagement Survey on Health and Wellbeing during Coronavirus Measures

Regional breakdown of survey findings and Week 8 (25th to 31st May 2020) routine data

World Health Organization Collaborating Centre on Investment for Health and Wellbeing, Public Health Wales
Public Health Wales are conducting a public engagement telephone survey to ask members of the public in Wales how coronavirus and related control measures are affecting their health and wellbeing.

The information collected from 500 or more randomly selected individuals provides the basis of the results presented in each weekly report.

The survey aims to provide data representative of the Welsh population and data are adjusted to represent the Welsh population by age, sex and deprivation.

In some weeks, new questions are added and others removed, depending on emerging issues at that time.

A sample of individuals from each week’s surveys are also followed up with a second call which explores some different aspects of the pandemic.

This week’s report contains some routine measures seen in previous reports alongside some new questions using the follow up data. These data were collected between the dates of 21st April and 29th May.

This week we have also combined all weekly survey data to examine differences and similarities between the health board regions in Wales. Whilst we have presented results corrected for differences in age and sex between regions, inferences about any differences between health boards should be drawn with caution due to sample sizes. We have provided some measures of statistical significance to inform interpretation.

We thank the people of Wales for giving us their valuable time to support this work.
Over 4,000 Welsh residents have participated in the survey to date and around 2,000 have completed a follow up survey.

**Analyses of survey data by health board show...**

The views and experiences of coronavirus and the restrictions are largely similar across Wales, with no difference in impacts on mental wellbeing across health boards.

The proportion of participants that think they have had coronavirus ranges from 8% in Powys to 15% in Cwm Taf Morgannwg.

Confidence in the NHS and positive attitudes towards Welsh Government and the police are high across all areas, and highest in Hywel Dda.

**Analyses of follow up survey data show...**

27% of people have had a scheduled medical appointment or procedure cancelled due to coronavirus.

12% of people have not attempted to get medical attention such as visiting a GP or going to A&E when they normally would have done.

87% of people think stronger relationships between people in communities will be a positive longer term impact of coronavirus.
596 Welsh residents aged 18 years and over were interviewed in week 8 of the survey (25\textsuperscript{th} to 31\textsuperscript{st} May).

75\% of people think the restrictions in place to manage coronavirus are about right, up from last week.

50\% of people think that shops should re-open within the next 3 weeks, up from last week.

56\% of people think that non-essential workers should be able to return to work within the next three weeks, up from last week.

44\% of people think that, as restrictions are lifted, people should be made to wear face masks in public places, down from last week.

40\% of people left their home every day in the last week, while 14\% did not leave their home at all.

52\% of people have been worrying ‘a lot’ about losing someone they love to coronavirus, down from last week.
During the coronavirus restrictions, have you...

- Had a scheduled medical appointment or procedure cancelled? 27%
- Not attempted to get medical attention such as visiting your GP or going to A&E when you normally would have done? 12%

Data from follow up surveys, adjusted to national demographics.

No significant difference by gender or deprivation.

No significant difference by age or deprivation.
Potential benefits of coronavirus restrictions

Data from follow up surveys, adjusted to national demographics.

Do you think the coronavirus situation will have any of the following positive long term impacts?

Methods and analyses

The survey

A national telephone survey conducted with adults (>18 years old) currently resident in Wales.

Data collection began at the beginning of April 2020 and is ongoing.

So far, over 4,000 people have told us about how the virus and the lockdown is impacting them.

Our analyses

These analyses consider how experiences of coronavirus may be different for people living in different parts of Wales. Here we have used local health board (LHB) areas to consider any regional variations. However, it is important to note that so far the survey has only sampled just over 200 people from Powys. Whilst this is proportional to the overall population distribution of Wales (see below), it increases the likelihood that differences between this and other areas may not be statistically significant. Further, there may be other differences between the LHBs that are not controlled for here and may impact findings (e.g. the higher prevalence of chronic health conditions in Hywel Dda, or a greater proportion of people living alone in Swansea Bay).

The distribution of survey respondents from each LHB is equivalent to the overall adult population breakdown of Wales, according to mid year 2018 estimates (see https://statswales.gov.wales/Catalogue/Population-and-Migration/Population/Estimates/Local-Health-Boards/populationestimates-by-lhb-age).

A generalized linear model function was used to explore independent relationships between outcomes of interest and LHB, whilst adjusting for age and gender.

Analyses were also corrected for time (i.e. week of survey). However, trends over time are not the focus of this report and are reported elsewhere.

Findings

Key differences are presented for each of the LHBs. Unless highlighted, differences are statistically significant at p<.05. Findings are drawn from data collected from weeks 2 to 8 of the survey, unless otherwise stated in footnotes.
