XXXXXXXXX to XXXXXXXXX

Dear XXX,

Yesterday in labour ward there were three patients induced with Propess for SGA (3rd centile) and other fetal concerns. One of them was having CTG every 2 hours. I could not see the plan in the notes but was told by the midwives that this is the protocol.

I will be grateful if you could clarify

1. What is the criteria for the first phase of IOL to be in labour ward and not ward 19. Do they need to stay on CDS until delivery?
2. How often are they expected to have CTG
3. What is the rationale for the protocol if any

Best wishes
XXX
